Editorial v

Regular papers

Carbohydrate regulation of leaf development: Prolongation of leaf senescence in Rubisco antisense mutants of tobacco
A. Miller, C. Schlagnhaufer, M. Spalding, S. Rodermel **1–8**

Photosystem II efficiency and mechanisms of energy dissipation in iron-deficient, field-grown pear trees (*Pyrus communis* L.)
F. Morales, R. Belkhodja, A. Abadía, J. Abadía **9–21**

Reduction of Q_A in the dark: Another cause of fluorescence F_o increases by high temperatures in higher plants
Y. Yamane, T. Shikanai, Y. Kashino, H. Koike, K. Satoh **23–34**

Effects of azide on the S_2 state EPR signals from Photosystem II
A. Haddy, R.A. Kimel, R. Thomas **35–45**

An FTIR study on the structure of the oxygen-evolving Mn-cluster of Photosystem II in different spin forms of the S_2 state
K. Onoda, H. Mino, Y. Inoue, T. Noguchi **47–57**

Acclimation of photosynthesis to temperature in eight cool and warm climate herbaceous C_3 species: Temperature dependence of parameters of a biochemical photosynthesis model
J.A. Bunce **59–67**

Occurrence of C_3 and C_4 photosynthesis in cotyledons and leaves of *Salsola* species (Chenopodiaceae)
V.I. Pyankov, E.V. Voznesenskaya, A.N. Kuz'min, M.S.B. Ku, E. Ganko, V.R. Franceschi, C.C. Black, Jr., G.E. Edwards **69–84**

Characterization of the *Porphyridium cruentum* Chl *a*-binding LHC by *in vitro* reconstitution: LHCaR1 binds 8 Chl *a* molecules and proportionately more carotenoids than CAB proteins
B. Grabowski, S. Tan, F.X. Cunningham, Jr., E. Gantt **85–96**

Photosynthetic acclimation of higher plants to growth in fluctuating light environments
Z.-H. Yin, G.N. Johnson **97–107**

Volume 63 No. 2 2000

Personal perspective

The golden age of biochemical research in photosynthesis
D.W. Krogmann **109–121**

Regular papers

Changes in chlorophyll fluorescence during exposure of *Dunaliella tertiolecta* to UV radiation indicate a dynamic interaction between damage and repair processes
P. Heraud, J. Beardall **123–134**

Characterization of processes responsible for the distinct effect of herbicides DCMU and BNT on Photosystem II photoinactivation in cells of the cyanobacterium *Synechococcus* sp. PCC 7942
J. Komenda, M. Koblížek, O. Prášil **135–144**

The IdiA protein of *Synechococcus* sp. PCC 7942 functions in protecting the acceptor side of Photosystem II under oxidative stress
P. Exss-Sonne, J. Tölle, K.P. Bader, E.K. Pistorius, K.-P. Michel **145–157**

Chlorophyll fluorescence quenching in the alga *Euglena gracilis*
M. Doege, E. Ohmann, H. Tschiersch **159–170**

Investigation of the plastoquinone pool size and fluorescence quenching in thylakoid membranes and Photosystem II (PS II) membrane fragments
J. Kurreck, R. Schödel, G. Renger **171–182**

Historical corner

Bicentenary homage to Dr Jan Ingen-Housz, MD (1730–1799), pioneer of photosynthesis research
H. Gest **183–190**

Volume 63 No. 3 2000

Obituary: Helmut Metzner (1925–1999)
K. Fischer-Zeh **191–194**

Minireview

Primary charge separation in Photosystem II
J.P. Dekker, R. Van Grondelle **195–208**

Regular papers

Inhibition of Photosystem II activity by saturating single turnover flashes in calcium-depleted and active Photosystem II
N. Keren, I. Ohad, A.W. Rutherford, F. Drepper, A. Krieger-Liszkay **209–216**

Protein domains required for formation of stable monomeric Lhca1- and Lhca4-complexes
J. Rupprecht, H. Paulsen, V.H.R. Schmid **217–224**

Targeted inactivation of the *psaK1*, *psaK2* and *psaM* genes encoding subunits of Photosystem I in the cyanobacterium *Synechocystis* sp. PCC 6803
S. Naithani, J.-M. Hou, P.R. Chitnis **225–236**

Photoinhibition as a function of the ambient redox potential in Tris-washed PS II membrane fragments
R. Gadjieva, H.-J. Eckert, G. Renger **237–248**

Chloroplasts of the green alga *Chlamydomonas reinhardtii* possess at least four distinct stromal processing proteases
A. Rüfenacht, A. Boschetti **249–258**

Structure and dynamics of photosynthetic membrane-bound proteins in *Rhodobacter sphaeroides*, studied with solid-state NMR spectroscopy
J. Kikuchi, M. Williamson, K. Shimada, T. Asakura **259–267**

The primary electron acceptor of green sulfur bacteria, bacteriochlorophyll 663, is chlorophyll *a* esterified with Δ2,6-phytadienol
M. Kobayashi, H. Oh-oka, S. Akutsu, M. Akiyama, K. Tominaga, H. Kise, F. Nishida, T. Watanabe, J. Amesz, M. Koizumi, N. Ishida, H. Kano **269–280**

Long-wavelength chlorophyll forms in Photosystem I from pea thylakoids
S.M. Kochubey, E.G. Samokhval **281–290**

Corrigendum: Volume 57: 139–158, 1998 **291**

Announcements **293–296**

Contents Volume 63 **297–299**

Author index Volume 63 **300**
